

User Stories and Acceptance Criteria

CRM Sales Analytics Dashboard

This document defines user stories and acceptance criteria for the CRM Sales Analytics Dashboard. The purpose is to convert business and functional requirements into clear, testable requirements from the user's point of view.

The user stories cover sales performance tracking, lead conversion, revenue monitoring, follow-up tracking, sales representative performance, lead source analysis, lost reason analysis, and dashboard filter behavior.

User Story 1: View Overall Sales Performance

As a Sales Manager,

I want to view total leads, converted leads, lost leads, conversion rate, total revenue, and open pipeline value,
so that I can quickly understand overall sales performance.

Acceptance Criteria

- Total Leads should count unique Lead_ID.
- Converted Leads should include only records where Lead_Status is Converted.
- Lost Leads should include only records where Lead_Status is Lost.
- Conversion Rate should be calculated as $\text{Converted Leads} / \text{Total Leads} \times 100$.
- Total Revenue should include only converted leads.
- Open Pipeline Value should include only open opportunities.
- KPI cards should update when filters are applied.x

User Story 2: Track Lead Conversion Rate

As a Sales Manager,

I want to track lead conversion rate,
so that I can measure how effectively leads are turning into customers.

Acceptance Criteria

- Conversion Rate should use only unique leads.
- Converted leads should be counted only when Lead_Status is Converted.
- The conversion rate should be shown as a percentage.
- Conversion rate should change based on selected filters such as date, region, sales representative, and lead source.
- The calculation should match the KPI logic document.

User Story 3: Monitor Revenue from Converted Leads

As a Business Head,

I want to view total revenue from converted leads,
so that I can track actual business value generated from sales.

Acceptance Criteria

- Revenue should be calculated only where Lead_Status is Converted.
- Lost, Not Interested, and open leads should not be included in revenue.
- Revenue should be shown by region, sales representative, and lead source.
- Total revenue should update when filters are applied.
- Revenue values should match the dataset and KPI logic.

User Story 4: Track Open Pipeline Value

As a Sales Manager,

I want to view open pipeline value,
so that I can understand the potential revenue from active opportunities.

Acceptance Criteria

- Open Pipeline Value should include only records where Opportunity_Status is Open.
- Closed opportunities should not be included.
- Open statuses should include New Lead, Contacted, Interested, Follow Up, Proposal Sent, and Negotiation.
- Open Pipeline Value should be filterable by region, sales representative, lead source, and lead status.
- The value should update based on selected filters.

User Story 5: Identify Overdue Follow-ups

As a Sales Manager,

I want to view overdue follow-ups,
so that I can ensure sales representatives do not miss important leads.

Acceptance Criteria

- Overdue follow-ups should include only open opportunities.
- Followup_Date should be before today.
- Converted, Lost, and Not Interested leads should not appear in overdue follow-ups.
- Closed opportunities should have Followup_Status as Closed.
- Overdue follow-ups should be visible by sales representative.
- The overdue follow-up count should match the UAT checklist validation.

User Story 6: View Sales Representative Performance

As a Sales Manager,

I want to compare sales representatives based on leads handled, conversions, revenue, and overdue follow-ups, so that I can identify high performers and areas needing improvement.

Acceptance Criteria

- The dashboard should show total leads handled by each sales representative.
- Converted leads should be shown for each sales representative.
- Revenue should include only converted leads.
- Conversion rate should be calculated for each sales representative.
- Overdue follow-ups should be shown for each sales representative.
- Users should be able to sort or compare sales reps based on performance.

User Story 7: Analyze Lead Source Performance

As a Marketing Manager,

I want to compare lead sources, so that I can understand which sources generate better-quality leads.

Acceptance Criteria

- The dashboard should show total leads by Lead_Source.
- The dashboard should show converted leads by Lead_Source.
- Conversion rate should be calculated for each lead source.
- Revenue by lead source should include only converted leads.
- Lead source analysis should update based on date, region, and sales rep filters.
- Lead sources with low conversion should be easy to identify.

User Story 8: Analyze Region-Wise Sales Performance

As a Business Head,

I want to view sales performance by region, so that I can identify strong and weak performing regions.

Acceptance Criteria

- The dashboard should show total leads by region.
- The dashboard should show converted leads by region.
- Revenue should be shown by region.
- Conversion rate should be calculated region-wise.
- Region filter should update all relevant visuals.

- Region-wise results should match the dataset totals.

User Story 9: Review Lost Reasons

As a Sales Manager,

I want to view reasons for lost or not interested leads, so that I can understand why opportunities are not converting.

Acceptance Criteria

- Lost Reason should appear only for Lead_Status values Lost and Not Interested.
- Converted and open leads should not have Lost Reason.
- The dashboard should show lost reason count by category.
- Lost reason analysis should be filterable by sales representative, region, and lead source.
- The lost reason chart should help identify the most common reasons for lead loss.

User Story 10: Track Lead Status Distribution

As a Sales Manager,

I want to view the number of leads in each lead status, so that I can understand the current sales pipeline stage-wise.

Acceptance Criteria

- The dashboard should show counts for New Lead, Contacted, Interested, Follow Up, Proposal Sent, Negotiation, Converted, Lost, and Not Interested.
- Open and closed statuses should be classified correctly.
- Lead status visuals should update when filters are applied.
- The total count across all statuses should match Total Leads.

User Story 11: Use Dashboard Filters

As a Dashboard User,

I want to filter dashboard data by date, region, sales representative, lead source, lead status, and opportunity status, so that I can analyze sales performance based on my requirement.

Acceptance Criteria

- Date filter should update all relevant visuals.
- Region filter should show only selected region data.
- Sales Representative filter should show only selected sales rep data.
- Lead Source filter should update source-level and overall visuals.

- Lead Status filter should show selected pipeline stage data.
- Opportunity Status filter should separate open and closed opportunities.
- KPI cards and charts should update correctly after filter selection.

User Story 12: Validate Dashboard Accuracy Before Delivery

As a Business Analyst,

I want to validate dashboard outputs using a UAT checklist, so that the dashboard can be approved before final delivery.

Acceptance Criteria

- Total Leads should match unique Lead_ID count.
- Converted Leads should match records where Lead_Status is Converted.
- Revenue should include only converted leads.
- Overdue follow-ups should include only open opportunities with past follow-up dates.
- Lost Reason should appear only for Lost and Not Interested leads.
- Filters should update visuals correctly.
- Days_To_Close should not show negative values.
- All UAT test cases should be marked Pass or Fail after validation.

Summary

These user stories help convert the CRM Sales Analytics Dashboard requirements into clear and testable conditions. They support dashboard development, KPI validation, filter testing, process flow mapping, and UAT execution.

The stories cover the needs of sales managers, business heads, marketing teams, sales representatives, dashboard users, and business analysts.
