

Functional Requirement Document

CRM Sales Analytics Dashboard

1. Project Overview

The CRM Sales Analytics Dashboard helps sales managers and business users monitor sales pipeline performance, lead conversion, revenue, follow-ups, sales representative performance, lead source quality, and lost reasons.

The dashboard uses a CRM sales dataset of 2,000 records. The dataset includes lead details such as Lead ID, Lead Source, Region, Sales Representative, Lead Status, Deal Value, Created Date, Follow-up Date, Closed Date, Lost Reason, Days to Close, Follow-up Status, and Opportunity Status.

2. Functional Scope

In Scope

The dashboard should support the following functions:

- Show high-level CRM sales KPIs.
- Track total leads, converted leads, lost leads, and open opportunities.
- Calculate conversion rate.
- Calculate total revenue from converted leads.
- Track open pipeline value.
- Identify pending and overdue follow-ups.
- Compare sales representative performance.
- Analyze lead performance by source.
- Analyze region-wise sales performance.
- Show lost reason distribution.
- Allow users to filter reports by date, region, sales representative, lead source, lead status, and opportunity status.
- Support validation through UAT test cases.

Out of Scope

The following items are not part of this project:

- CRM software development.
- Real-time API integration.
- Automated email or SMS follow-up.
- Role-based login system.

- Payment tracking.
- Customer support reporting.
- Marketing cost and ROI analysis.
- Machine learning-based forecasting.

3. Users of the Dashboard

User	Purpose
Sales Manager	Track sales team performance, conversion, follow-ups, and pipeline health
Business Head	Review revenue, open pipeline value, and business-level performance
Sales Representative	Track assigned leads and follow-up status
Marketing Team	Analyze lead source quality and conversion performance
Data Analyst	Maintain reporting logic, validate KPIs, and support dashboard updates
Business Analyst	Define requirements, user stories, acceptance criteria, and validation rules

4. Dashboard Pages

The dashboard should include the following pages:

Page No.	Page Name	Purpose
Page 1	Executive Summary	Shows overall CRM sales performance
Page 2	Sales Pipeline Analysis	Shows lead status, opportunity status, and pipeline movement
Page 3	Sales Representative Performance	Compares individual sales rep performance
Page 4	Lead Source and Region Analysis	Analyzes lead quality by source and region
Page 5	Follow-up and Lost Reason Analysis	Tracks overdue follow-ups and lost lead reasons

4.1 Page 1: Executive Summary Requirements

The Executive Summary page should provide a quick business-level view of sales performance.

Required KPI Cards

KPI Card	Requirement
Total Leads	Show count of unique Lead ID
Converted Leads	Show count of leads where Lead Status is Converted
Lost Leads	Show count of leads where Lead Status is Lost
Conversion Rate	Show percentage of converted leads out of total leads

Total Revenue	Show sum of Deal Value for converted leads only
Open Pipeline Value	Show sum of Deal Value for open opportunities
Overdue Follow-ups	Show count of open leads where Follow-up Date is before today

Required Visuals

Visual	Requirement
Monthly Lead Trend	Show total leads by month
Lead Status Distribution	Show count of leads by Lead Status
Revenue by Region	Show converted revenue by region
Conversion Rate by Lead Source	Show source-wise conversion percentage

4.2 Page 2: Sales Pipeline Analysis Requirements

The Sales Pipeline Analysis page should show how leads move across different pipeline stages.

Required Visuals

Visual	Requirement
Lead Status Chart	Show count of leads by New Lead, Contacted, Interested, Follow Up, Proposal Sent, Negotiation, Converted, Lost, and Not Interested
Opportunity Status Chart	Show open vs closed opportunities
Pipeline Value by Status	Show total Deal Value by Lead Status
Open Opportunity Table	Show open leads with Lead ID, Sales Rep, Region, Lead Source, Lead Status, Deal Value, and Follow-up Date

Functional Rules

- Open statuses should include New Lead, Contacted, Interested, Follow Up, Proposal Sent, and Negotiation.
- Closed statuses should include Converted, Lost, and Not Interested.
- Open pipeline value should include only open opportunities.
- Closed opportunities should not appear in the open opportunity table.

4.3 Page 3: Sales Representative Performance Requirements

This page should help managers compare sales representatives based on performance.

Required Visuals

Visual	Requirement
Sales Rep Ranking Table	Show Sales Rep, Total Leads, Converted Leads, Conversion Rate, Revenue, Open Pipeline Value, and Overdue Follow-ups
Revenue by Sales Rep	Show converted revenue by sales representative
Conversion Rate by Sales Rep	Show conversion percentage by sales representative
Overdue Follow-ups by Sales Rep	Show count of overdue follow-ups for each sales representative

Functional Rules

- Sales rep revenue should include only converted leads.
- Conversion rate should be calculated for each sales representative.
- Overdue follow-ups should include only open opportunities.
- The user should be able to filter this page by date, region, lead source, and lead status.

4.4 Page 4: Lead Source and Region Analysis Requirements

This page should help business users understand where leads are coming from and which regions perform better.

Required Visuals

Visual	Requirement
Leads by Source	Show total leads by Lead Source
Converted Leads by Source	Show converted leads by Lead Source
Conversion Rate by Source	Show source-wise conversion rate
Revenue by Lead Source	Show converted revenue by Lead Source
Leads by Region	Show total leads by Region
Revenue by Region	Show converted revenue by Region

Functional Rules

- Lead source analysis should help compare quality of leads from website, referral, social media, email campaign, cold call, and other sources.
- Region analysis should show both lead volume and revenue performance.
- Conversion rate should update based on selected filters.

4.5 Page 5: Follow-up and Lost Reason Analysis Requirements

This page should help managers identify follow-up delays and reasons for lost opportunities.

Required Visuals

Visual	Requirement
Follow-up Status Distribution	Show count of leads by Upcoming, Due Today, Overdue, and Closed
Overdue Follow-up Table	Show open leads where Follow-up Date is before today
Lost Reason Chart	Show count of lost and not interested leads by Lost Reason
Lost Leads by Sales Rep	Show lost leads by sales representative
Lost Leads by Source	Show lost leads by lead source

Functional Rules

- Follow-up tracking should apply only to open opportunities.
- Closed opportunities should have Follow-up Status as Closed.
- Lost Reason should appear only for Lost and Not Interested leads.
- Converted leads should not have Lost Reason.
- Overdue follow-ups should exclude Converted, Lost, and Not Interested leads.

5. Filters and Slicers

The dashboard should include the following filters:

Filter	Requirement
Date Range	User should filter data by Created Date or Closed Date, depending on the visual
Region	User should filter by selected sales region
Sales Representative	User should filter by individual sales rep
Lead Source	User should filter by lead source
Lead Status	User should filter by lead stage
Opportunity Status	User should filter by Open or Closed
Product / Service	User should filter by product or service if available in dataset

Filter Behavior

- Filters should update all relevant visuals on the page.
- Date filter should support monthly and date range analysis.
- Sales rep filter should update lead, revenue, conversion, and follow-up visuals.
- Lead source filter should update source-level and overall dashboard visuals.
- Opportunity status filter should separate open and closed opportunities.

6. Business Logic Rules

The dashboard should follow these business logic rules:

1. Total Leads should count unique Lead_ID.
2. Converted Leads should include only records where Lead_Status = Converted.
3. Lost Leads should include only records where Lead_Status = Lost.
4. Not Interested leads should be treated as closed opportunities.
5. Revenue should be calculated only for converted leads.
6. Open Pipeline Value should include only open opportunities.
7. Days_To_Close should be calculated only for closed opportunities.
8. Days_To_Close should not show negative values.
9. Closed_Date should not be earlier than Created_Date.
10. Lost_Reason should be filled only for Lost and Not Interested leads.
11. Converted leads should not have Lost_Reason.
12. Followup_Status should be Closed for all closed opportunities.
13. Overdue follow-ups should include only open opportunities where Followup_Date is before today.
14. Open opportunities should not have Closed_Date.
15. Closed opportunities should have Closed_Date.

7. Data Quality Requirements

The dashboard should support the following data quality checks:

Check	Expected Result
Duplicate Lead_ID check	Lead_ID should not be duplicated
Negative Days_To_Close check	Days_To_Close should not be negative
Closed date validation	Closed_Date should not be earlier than Created_Date
Lost reason validation	Lost_Reason should appear only for Lost or Not Interested leads
Revenue validation	Revenue should be calculated only for Converted leads
Follow-up validation	Closed opportunities should not appear as overdue
Opportunity status validation	Lead_Status should correctly map to Open or Closed

8. Dashboard Layout Requirements

Top Section: The top section should display KPI cards:

- Total Leads
- Converted Leads
- Conversion Rate
- Total Revenue
- Open Pipeline Value
- Overdue Follow-ups

Middle Section: The middle section should display business visuals:

- Lead Status Distribution
- Revenue by Region
- Conversion Rate by Lead Source
- Monthly Lead Trend

Bottom Section: The bottom section should include detailed tables:

- Sales Rep Performance Table
- Overdue Follow-up Table
- Lost Reason Breakdown

Filter Panel: The filter panel should include:

- Date Range
- Region
- Sales Representative
- Lead Source
- Lead Status
- Opportunity Status

9. Export and Usability Requirements

The dashboard should support the following usability requirements:

- Users should be able to apply filters easily.
- KPI values should be easy to understand.
- Visuals should have clear titles.
- Tables should show only useful fields.
- Dashboard should avoid unnecessary visuals.
- Users should be able to export summarized data if required.
- Dashboard layout should be clean and readable.
- Important follow-up issues should be easy to identify.

10. Refresh Requirement

Dashboard can be refreshed manually after dataset updates.

Expected refresh rule:

- Data refresh should happen whenever the CRM sales dataset is updated.
- Dashboard calculations should update after refresh.
- All visuals should reflect the latest available data after refresh.

11. Non-Functional Requirements

Requirement Area	Requirement
Performance	Dashboard should load visuals without unnecessary delay
Usability	Dashboard should be simple and easy to navigate
Accuracy	KPI calculations should match the KPI logic document
Maintainability	KPI formulas and data rules should be clearly documented
Readability	Visual titles, labels, and filters should be easy to understand
Compatibility	Dashboard should work in Power BI Desktop or Excel, depending on final tool used
Validation	Dashboard should support UAT checklist validation

12. Acceptance Criteria

The dashboard will be accepted if:

- Total Leads match the unique Lead_ID count.
- Converted Leads include only Lead_Status = Converted.
- Conversion Rate is calculated correctly.
- Total Revenue includes only converted leads.
- Open Pipeline Value includes only open opportunities.
- Overdue Follow-ups include only open opportunities with past follow-up dates.
- Lost Reason appears only for Lost and Not Interested leads.
- Days_To_Close does not contain negative values.
- Filters update all relevant visuals correctly.
- Sales rep, region, and lead source visuals match the dataset.
- UAT checklist test cases are passed.

13. Dependencies

The dashboard depends on:

- Clean CRM sales dataset.
- Correct lead status mapping.
- Correct opportunity status mapping.
- Valid Created_Date, Followup_Date, and Closed_Date fields.
- Defined KPI logic.
- Defined UAT checklist.
- Dashboard development tool such as Power BI or Excel.

14. Assumptions

The following assumptions are considered:

- Each Lead_ID represents one unique lead.
- Converted leads represent successful sales.
- Lost and Not Interested leads are closed opportunities.
- Open leads require follow-up tracking.
- Revenue is counted only when a lead is converted.
- Manual refresh is acceptable for this project.

15. Deliverables

The expected deliverables for this project are:

- CRM Sales Dataset
- Business Requirement Document
- Functional Requirement Document
- KPI Logic Document
- User Stories and Acceptance Criteria
- Process Flow Diagram
- UAT Checklist
- Dashboard Wireframe
- Power BI Dashboard

16. Conclusion

This FRD defines the functional requirements for the CRM Sales Analytics Dashboard. It explains dashboard pages, KPIs, filters, visuals, data fields, reporting logic, business rules, data quality checks, and acceptance criteria.

This document helps convert the business needs from the BRD into clear dashboard functionality. It also supports dashboard development, user story creation, process flow mapping, and UAT validation.
