

KPI Logic

KPI	Logic	Purpose
Total Leads	Count of unique Lead_ID	Measures lead volume
Converted Leads	Count where Lead_Status = Converted	Measures successful sales
Lost Leads	Count where Lead_Status = Lost	Tracks failed opportunities
Conversion Rate	$\text{Converted Leads} / \text{Total Leads} \times 100$	Measures sales effectiveness
Total Revenue	Sum Deal_Value where Lead_Status = Converted	Tracks closed revenue
Open Pipeline Value	Sum Deal_Value where Opportunity_Status = Open	Tracks future opportunity value
Overdue Follow-ups	Open leads where Followup_Date < Today	Tracks missed action items
Average Days to Close	Average Days_To_Close for closed leads	Measures sales cycle time
Average Deal Value	$\text{Total Revenue} / \text{Converted Leads}$	Measures average sales size

UAT (User Acceptance Testing) Checklist

Test Case	Expected Result	Status
Validate total leads	Dashboard count should match unique Lead_ID count	Pass/Fail
Validate converted leads	Only Lead_Status = Converted should be counted	Pass/Fail
Validate conversion rate	Formula should be $\text{Converted Leads} / \text{Total Leads} \times 100$	Pass/Fail
Validate revenue	Revenue should include only converted leads	Pass/Fail
Validate overdue follow-ups	Only open leads with past follow-up dates should appear	Pass/Fail
Validate lost reason chart	Only lost and not interested leads should be included	Pass/Fail
Validate date filter	All visuals should update based on selected date range	Pass/Fail
Validate region filter	Dashboard should show only selected region data	Pass/Fail
Validate Days_To_Close	No negative values should appear	Pass/Fail
Validate export	User should be able to export report data if required	Pass/Fail
